Update on Voestalpine – During a Hazard Eval teams doing assessments – the TCEQ Regional Rep saw the opportunity to do the sampling. I am being told it is not an ESF-10 issue, but we weren't made aware of that prior to the publishing of the Situation Report.

Voestalpine – TCEQ lead; teams assessed facility on Wednesday but could not access. Apparently they are a facility TCEQ watches for issues they have had in the past. Based on some pre and post hurricane pictures, there were some shavings piles pre-storm and not there after the storm. The teams were able to access the location via water and took the samples mentioned. They are being handled through TCEQ and their labs.

Signet – Multi-day oil removal operation on an ocean-going tug, which was grounded near Aransas Pass. 79,000 gallons of diesel oil, 4000 gallons of lube and hydraulic oil have been removed. Today they are conducting waste oil removal and by Monday they are hoping to have straps in place to re-stabilize the vessel.

We need more details on this Signet transfer operation and on sampling at Voestslpine.
